

## ABSTRACT OF THE INVENTION

A system and method for detecting an electronic communication such as an email, an instant messaging session, or a chat session that relates to an unsafe behavior directed to or engaged by a user. Instructions are adapted to analyze one or more features of the electronic communication, which is sent or received by the user. Instructions are adapted to categorize the electronic communication as relating to the unsafe behavior based on the analyzed features. A report is generated if the electronic communication is categorized as relating to the unsafe behavior. Instructions are adapted to send the report to a responsible person such as a parent, guardian, or other responsible person of the user. The report informs the responsible person that the electronic communication possibly relates to the unsafe behavior.
